

# We provide conditions that you can control

## Solution for efficient compartmentalization and partition of spaces.

Condicon reusable temporary wall system is resource efficient circular economy solution saving time, money, resources, and nature. The solution saves over 50 % of total costs compared to traditional solutions, at the same time reducing significantly the use of single-use plastic.

Designed for sheltering in construction, repair construction and other activities where dust proof short term protection or compartmentalization is needed, including heat insulation for winter construction.

### Avoiding disturbances for normal operations of spaces

A complete wall system including wall, door, and adjustment elements; additional adjustment elements used to cover challenging edging and roof areas. Fast installation and dismantling reduce disturbances to other activities. Condicon walls improve labor safety both during installation and operation. Materials are all 100 % recyclable, significantly reducing construction waste and CO2.

- Easy and fast way to separate spaces
- Stylish and tidy temporary wall
- Air and dust proof
- Minimized disturbances to normal operations

### Efficient temporary sheltering

Condicon wall system is relevant solution for cases where efficient and high-quality short-term sheltering is needed, emphasizing complete protection and fast installation.

Tidy and stylish compartmentalization reduces need for temporary evading spaces and enables continuation of regular operations next to the repair areas, whether they are offices, schools, hospitals, airports, or other business spaces.

**Over 50 %  
overall  
savings**
